MAY OUTPACE IN NUCLEAR SHIPS

Joint Committee Declares Pentagon Lets Work on Atom Submarines Lag

M'NAMARA IS CRITICIZED

Group Deplores Refusal of Funds for a New Project Proposed by Rickover

> By JOHN W. FINNEY Special to The New York Time

WASHINGTON, Feb. 25-The Joint Congressional Committee on Atomic Energy warned today that the United States might be "unable to counter the rapidly increasing Soviet sub-marine threat" unless the Defense Department changed its policies on construction of nuclear submarines.

The committee, long a supporter of nuclear power for Navy ships, also criticized the Defense Department for delaying the construction of nuclearpowered surface warships.

It called on Congress to take the initiative in overturning Defense Department policies specifying that all future escort ships for naval striking forces should be nuclear-powered.

The committee presented its views, highly critical of decisions made by Defense Secretary Robert S. McNamara, in a foreword to a 505-page study of the Navy nuclear propulsion program.

The Defense Secretary was criticized for not "moving forward aggressively" with the pment of improved types ear attack submarines.

The study brought out, for example, that the Defense Department had been refusing to provide funds for a new type of submarine nuclear propulsion plant proposed by Vice Adm. Hyman G. Rickover, director of the naval reactor

program.
"In view of the rapidly expanding and improving Soviet nuclear submarine capability,' the committee also found "most questionable" the present Defense Department plans to construct only four more nuclear attack submarines and "then to terminate the nuclear submarine building program."

The committee said it was "extremely concerned that unless immediate and major improvements are made by the Department of Defense in their treatment of the nuclear submarine program, the United States may find itself unable to counter the rapidly increasing Soviet submarine threat."

month, made public today by a year.

heavily censored, Admiral Rick-over said that while the Rus-sians experienced technical difficulties with their early nuclear submarines, "it is obvious they have overcome these problems and are now building at an increased rate."

Admiral Rickover's appraisal

Admiral Rickover's appraisal of the Soviet nuclear submarine program was understood to have been supported by secret briefings given the committee earlier this year by the Central Intelligence Agency.

The United States now has 74 nuclear submarines in operation—33 attack submarines and

14 nuclear submarines in operation—33 attack submarines and their answer to a request for 41 missile-firing, Polaris submarines. Thirty-three more nicear attack submarines have committe: "It is not proper to been authorized.

Admiral Rickover told the committee "It is not proper to draft young boys, send them

ocounter the rapidly increasing Soviet submarine threat."

the committee, Admiral Rick-over predicted that under present Pentagon plans the United States "in a few years" would lose its numerical advantage over the Soviet Union in nuclear submarines.

Furthermore, he said, it likely that the Soviet nuclear submarines will be superior in some respects to ours."

In his testimony, which was states and expansion of production capabilities, the form submarines "will be superior in some respects to ours."

In his testimony, which was a result of the delays, Admiral Rickover said, the Nayy is Confronted with a "derthining industrial base" for the Nayy.

On that point he was supported by Dr. Glenn T. Seaborg chairman of the Atomic Energy Commission.

In a letter made public by the committee, Dr. Seaborg said:

"If the United States."

The department, the testimony disclosed, rejected a Rickover suggestion that an order be issued under the Defense Potential varieties and results and major surface warships contemplated by the Navy, it is important that a firm, long-range nuclear shipbuilding program be decided upon as soon as possible, so that long-term commitments can be obtained from suppliers."

An example of the difficulty in maintaining the industrial base, Admiral Rickover said in testimony last March, which

An example of the difficulty in maintaining the industrial base, Admiral Rickover said in testimony last March, which was also made public today, that Westinghouse and General Electric declined last year to bid for construction of turbine congretors urgently needed for generators urgently needed for a new design of submarine.

Companies 'Too Busy'

The reason given by the companies, the admiral said, was that they were "too busy" on other civilian and military other other civilian and military work. But the admiral suggest-ed that the companies preferred to do commercial work because there was more profit there, less design effort and

less supervision.

"They want to do business with the Government on their own terms," he said. "For example, recently they wanted to build equipment for a cambathant Navy ship on the basis that there would be no specifications of inspection and no remere would be no specifications, no inspection, and no required delivery date. That was their answer to a request for a bid."

been authorized.

In his recent statement to out to fight and take the Congress, Mr. McNamara proposed to end the construction program by asking for four additional attack submarines—two in the fiscal year 1969 and two in the fiscal year 1970.

The Soviet Union now has some 55 nuclear submarines small percentage of its efforts.
